

# Web map for the youth, by the youth

YouthMap 5020 is a project of making a city web map for the youth of Salzburg, involving the youth directly and actively. Around 120 local youths participate in the map development process. Aged 12 to 18 years, the pupils are involved in each step of the project: user requirements specification, geo database building, map design and implementation.

The map will show the places most important to the Salzburg youth. The pupils used Maptionnaire to collect information about these places and their relevant attributes. They generated a map-based questionnaire, spread it, and gathered about 2, 200 answers from more than 200 teenagers. This data was pre-processed, analyzed and added to the YouthMap 5020.

YouthMap 5020 is funded by BMVIT in the FFG program Talente Regional. The partners are the IFFB Geoinformatics -Z\_GIS, University of Salzburg, the City of Salzburg and the company SynerGIS. The 120 young participants are from seven local schools.
