

Tehrani teenagers used Maptionnaire in farsi

Maptionnaire can be used in different environments and for various purposes. For her Master's thesis, Iranian student Mina Rezae researched how to plan for a teenager-friendly city. Rezae conducted participatory research in the high schools of Tehran's Golha area, and made a Maptionnaire survey in farsi.

The survey itself was answered by 22 teenagers in the spring of 2014. Iranian adults also tried answering the questionnaire, and found it easy to use.

"Using Maptionnaire for my research was a really interesting experience. It is a good tool for participatory urban research, because it enables a wide range of spatial and traditional questions."

— Mina Rezae, student of urban studies,
University of Tehran.
