

From barracks to homes

Mapita
2014

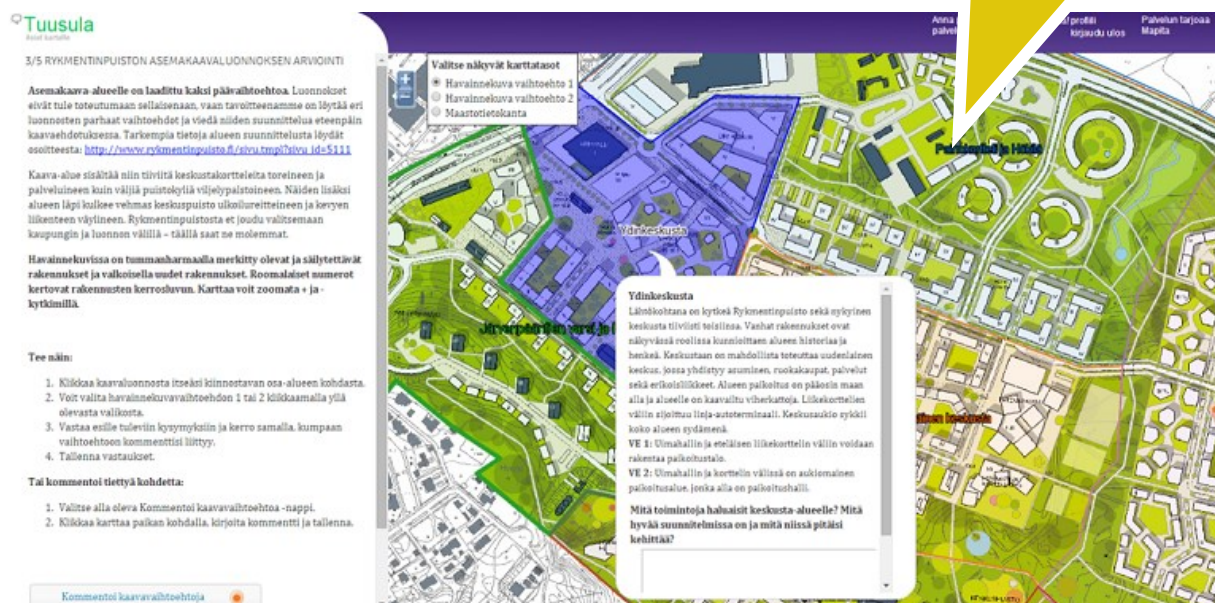

The municipality of Tuusula is planning to build a residential area of 15,000 inhabitants in the former military area of Rykmentinpuisto. The residents of Tuusula were included in the planning process at an early stage.

Mapita cooperated closely with the city in creating a map-based survey. It attracted 864 respondents who they made 1146 map entries. Among others, they marked places where they think new public services are needed. Four different resident types emerged from the survey results. They have different desires for commuting, socializing with their neighbors and using renewable energy.

Mapita presented the survey results in public meetings of residents and policymakers. The results aided in making several draft plans, which could be compared by the public on a web page created by Mapita.

"The municipality of Tuusula wanted to give the potential new residents an opportunity to voice their opinions, and the softGIS questionnaire made this possible. Working with Mapita has been great and exemplary. We are waiting with great enthusiasm, how the results can help the planning and building of the area."

- Tuomo Sipilä, Project Developer, Municipality of Tuusula.
